1 NUPOWER™ PRODUCT LINE OVERVIEW

The NuPower family of solid-state RF power amplifier (PA) modules is designed to meet the demanding needs of the Aerospace & Defense, Industrial, and Commercial markets. Based on the latest gallium nitride (GaN) technology, NuPower's power efficiency and miniature form factor make it ideal for size, weight, and power-constrained broadband RF telemetry and tactical communications systems.

1.1 NUPOWER™ PRODUCT LINE HIGHLIGHTS

- High Performance: Unique combination of broadband coverage, miniature form factors, and high efficiency.
- Enclosures: The NuPower family of power amplifiers is housed in a silver nickel plated aluminum enclosure with mounting holes incorporated into the chassis.
- Completely Characterized: The NuPower family of solid-state power amplifiers has been completely characterized over temperature, voltage, and frequency. These high-performance modules offer significant value for the OEM user or the Systems Integrator.
- User Friendly: Reverse-Voltage & Over-Voltage protection and regulator thermal shutdown provide defenses against user interface issues.
- High Reliability: NuWaves' selection of conservatively rated components provides high reliability. Each NuPower is inspected to IPC-A-610 Class II quality standards. NuWaves' Quality Management System is AS9100:2016 Rev D and ISO 9001:2015 certified.
- Applications: Unmanned Aircraft Systems (UAS) • Unmanned Ground Vehicles (UGV) • Unmanned Surface Vehicles (USV) • Broadband RF Telemetry • RF Communication Systems • Software Defined Radios • Test Labs
- Available Options:
 - Fan-cooled heat sink with AC/DC adapter
 - Labeled interface cable with banana jack plugs
 - 1 Watt input drive level

2 NUPOWER™ S-10-C01-S01 OVERVIEW

The NuPower™ S-10-C01-S01 solid state power amplifier (SSPA) is a small, highly efficient PA that provides over 10 watts of RF power across S-band.

Based on the latest GaN technology, NuPower's typical 26% power efficiency and 3.9 cubic inch form factor makes it ideal for size, weight, and power-constrained broadband RF telemetry and tactical communications systems.

The NuPower NW-PA-S-10-C01-S01 accepts a nominal -5 dBm RF input and provides over 44 dB of power gain from 3000 to 4000 MHz. NuPower PAs feature over-voltage and reverse-voltage protection in addition to a simple control line interface allowing the user to easily place the module into transmit or standby mode of operation. A kit is available for purchase which includes a fan-cooled heatsink with AC / DC power adapter and upgraded interface cable with labeled banana plugs.

Figure 1: NuPower NW-PA-S-10-C01-S01 Functional Diagram

2.1 NUPOWER NW-PA-S-10-C01-S01 SPECIFICATIONS

The subsequent tables in this section outline the NuPower NW-PA-S-10-C01-S01's performance specifications.

Table 1: NuPower NW-PA-S-10-C01-S01 Electrical Specifications

Parameter	Specification
Frequency Range	3 GHz to 4 GHz
RF Output Power	8 Watts (min)
RF Large Signal Gain	44 dB (min)
RF Small Signal Gain	52dB (typ)
2 nd Harmonic	-30 dBc (typ)
Supply Voltage	+11 to +32 VDC
Current Consumption	2 A @ +28 VDC (typ)
Power Amplifier Enable	+5 VDC On (RF Enable)

Nominal Input Drive Level	-5 dBm
Maximum Input Drive Level (No damage)	+10 dBm
Impedance	50 Ω

Table 2: NuPower NW-PA-S-10-C01-S01 Environmental Specifications

Operating Conditions	Specification
Operating Temperature for Continuous Operation (>5 minutes)	-40 to +60 °C (ambient) -40 to +85 °C (baseplate)
Operating Temperature for 20% Duty Cycle	-40 to +65 °C (ambient) -40 to +85 °C (baseplate)
Storage Temperature	-55 to +85 °C

2.2 NUPOWER NW-PA-S-10-C01-S01 MECHANICAL SPECIFICATIONS

Figure 2: NuPower NW-PA-S-10-C01-S01 Mechanical Outline

Table 3: NuPower NW-PA-S-10-C01-S01 Mechanical Specifications

Parameter	Specification
RF Connectors	SMA (female)
Control / Power Interface Connector	9 Pin Micro-D (socket)
Dimensions (L x W x H)	3.25" x 2.00" x 0.5"
Weight	3.7 oz.

2.3 HEAT SINKING

The NuPower NW-PA-S-10-C01-S01 is offered as a stand-alone module or with an optional heat sink (P/N: HTSK-08), which includes a 28 VDC fan-cooled heatsink and requisite power cable.

Figure 3: The NuPower PA Kit offers “out-of-the-box” operation for the user. The fan-cooled heatsink with an AC/DC adapter is shown with an example PA (NuPower NW-PA-S-10-C01-S01 not shown).

Caution: The use of external heat-sinking is required especially for those applications requiring high duty cycle operation (e.g. continuous wave) or for extended on-time testing. Operation without a proper heat sink under these conditions will cause permanent damage to the product and will void the product warranty.

The external heatsink thermal resistance requirements are:

- <0.25 °C/W for operation up to 60 °C ambient
- <0.7 °C/W for operation up to 40 °C ambient

3 SETUP AND OPERATION

This section provides specific details for proper operation of the NuPower NW-PA-S-10-C01-S01 module. Following these guidelines will prevent damage to the power amplifier or external equipment.

3.1 POWER SUPPLY REQUIREMENTS

To operate the NuPower NW-PA-S-10-C01-S01, ensure that the power supply has adequate overhead to source the current demand of the RF power amplifier. The power supply source must provide a typical voltage of +28 VDC with greater than 3 amps capability.

3.2 CONNECTING A PROPER LOAD TO THE ANTENNA TERMINAL

To prevent damage to the PA, the antenna terminal must be terminated into a 50 Ω load. Examples of a proper load include:

- Directly connecting to an antenna specified for the frequency range (3000 MHz to 4000 MHz). Connecting to an inappropriate antenna may result in damage to the PA module.
- Connecting to a proper antenna through a 50 Ω transmission line or coaxial cable. Avoid using damaged cables or corroded connectors while attaching the unit to an antenna.
- Terminating the antenna terminal into a 50 Ω power attenuator with minimum 20 dB attenuation.
- Connecting to a load capable of dissipating the RF power from the PA module. Loads capable of handling 50 Watts (min) are recommended.

3.3 POWERING-UP THE NW-PA-S-10-C01-S01

The NuPower NW-PA-S-10-C01-S01 must be terminated to a proper load before power is applied. Refer to Section 3.2 for the specifications of the proper load. After the PA is properly terminated, the interface cable can be connected to the unit and power can be applied. The PA is now ready for operation.

3.4 TRANSMIT TURN-ON TIME

Caution: Do not apply transmit data until the PA module is at full power. This will prevent loss of data at the beginning of a message.

The NuPower NW-PA-S-10-C01-S01 is at full power approximately 2 μ S after the RF Enable line goes high (+5 VDC). Therefore, transmit data can be applied to the input after 2 μ S without loss of data.

4 HARDWARE INTERFACE

- The RF Input connector is SMA (female).
- The RF Output connector is SMA (female).
- The pin-out definitions for the 9 pin Micro-D socket connector are provided in Table 4. In a typical installation, the PA module is mated to a host controller board via a cable harness.

The RF Out SMA connector is the antenna connection. This connection should always be loaded into 50 Ω , otherwise the PA could be damaged.

4.1 INTERFACE CABLE HARNESS

The cable harness that connects the host controller to the 9 pin Micro-D connector of the NuPower NW-PA-S-10-C01-S01 is made up of 9 wires.

Table 4: NuPower NW-PA-S-10-C01-S01 Interface Pin-Out Definitions

Pin No.	Pin Name	I/O	Description
1, 2	V Supply	I	Primary Power (+11 to +32 VDC)
3, 4	GND	I	Signal and Power Ground
5	RF Enable	I	Transmit Enable
6, 7, 9	N.C.	-	N/A
8	Temp Flag	0	Over-temp Indicator (+5VDC = no fault; 0VDC = temp fault)

Figure 4: Micro-D Socket Locations

4.2 DC POWER

The nominal supply voltage for the NuPower NW-PA-S-10-C01-S01 is +28 VDC; however, the amplifier module is able to support operation over a supply voltage range of +11 to +32 VDC.

4.3 GROUND

The signal and power grounds are tied together in the PA module.

4.4 RF ENABLE

This signal is the logic control input that designates whether the unit is in transmit or standby mode. The RF Enable line is pulled low internally placing the PA module in *standby* mode. If the pin is left floating (i.e. not connected), the unit will default to *standby* mode.

Applying +5 VDC to the RF Enable pin (Pin 5) places the unit in *transmit* mode.

4.5 TEMP FLAG

This signal is a logic level output to indicate an over-temperature condition in the NuPower NW-PA-S-10-C01-S01. A logic high (+5 VDC) indicates normal operation, while a logic low (0 VDC) indicates an over-temperature condition. The NuPower NW-PA-S-10-C01-S01 incorporates internal logic circuitry that turns off the DC bias to the RF transistors.

Caution: The amplifier should be shut down and allowed to cool off when the over-temperature flag is set high to avoid damage to the module.

5 PRODUCT DISPOSAL – END-OF-LIFE

Safety is a guiding principle of NuWaves Engineering. We ensure safe production and operation of our products, as well as end-of-life disposal. Improper disposal can adversely affect the environment, wildlife and human health. Please follow these guidelines when disposing of a NuWaves product:

- Do not remove the cover or any hardware
- Do not remove components from the circuit card assembly
- Do not incinerate
- Do not crush or shred
- Do not dispose of as unsorted municipal waste
- Do not export e-waste outside of the original destination country for recycling
- Utilize an e-Steward or ISO14001 certified e-waste recycler
- Consider export controls during recycler selection
- If a NuWaves product is incorporated into a larger system or sub-system, ensure that these guidelines are followed at system end-of-life

6 GETTING HELP - APPLICATIONS ENGINEERING

NuWaves Engineering offers technical support for basic configuration help and troubleshooting, Monday through Friday, 8 a.m. to 5 p.m. Eastern Time.
