The NuPower Xtender ${ }^{\text {TM }}$ DUAL LS-20-S01-D30 is a $\mathbf{2 x 2}$ dual channel bi-directional amplifier ideal for extending the range of communications and datalinks for ISR applications. This amplifier supports NxN MIMO radios, where $2 \times 2$ or $4 \times 4$ configurations are used for high data rate applications. The bidirectional amplifier typically generates 25 Watts of RF power from $\mathbf{1 0 0 0}$ to $\mathbf{2 5 0 0} \mathbf{~ M H z}$ in transmit mode and the integrated low-noise amplifier typically provides 14 dB of gain in receive mode.
Based on the latest gallium nitride (GaN) technology, the Xtender typically offers 39\% power efficiency at most frequencies and its compact size makes it ideal for integration into space-constrained platforms. Adjacent radio frequency bands, such as the popular 900 MHz Industrial, Scientific and Medical (ISM) band, are also supported by the bidirectional PA, at lower peak power levels.
Accepting a nominal +30 dBm RF input, the Xtender typically provides 14 dB of gain. The Xtender also features over-voltage and reverse-voltage protection and operates over a wide temperature range of -40 to $+85^{\circ} \mathrm{C}$ baseplate.
Extend your operational communication range with NuPower ${ }^{\mathrm{TM}}$ amplifiers from NuWaves RF Solutions.

## Features

- 25 Watts (typ) RF Output Power
- 1.0 to 2.5 GHz
- Bidirectional Operation
- 14 dB (typ) of Transmit Gain
- 14 dB (typ) Receive Gain
- Fast T/R Mode Switching with Auto-Sensing or Manual T/R Line
- Small Form Factor
- High Efficiency GaN Technology
- Over-Voltage \& Reverse-Voltage Protection

## Applications

- Unmanned Aircraft Systems (UAS) Group 2 and Group 3
- Unmanned Ground Vehicles (UGV)
- Software Defined Radios
- Counter UAS Detection and Mitigation
- MIMO/MANET Radio Range Extension
- SISO Radio Range Extension
